21 drip points that enables hot water can be poured onto the entire surface of the coffee grounds.

High temperature extraction system.

Water in the tank is circulated and heated to 65° C then passes through the heater to the drip holes. Hot water from the drip holes rises to about 95° C and then reaches the optimum temperature of about 93° C inside the dripper. Using this hot water, the procedure includes 30 seconds of moistening, followed by roughly 3 minutes of dripping. A dual layered tank is employed for high thermal insulation.

Coffee Mill

Important preparations before brewing coffee

All manual coffee grinders use mills made of ceramic. Ceramic mills keep the temperature down when grinding and can be easily rinsed with no potential rusting. Coffee mill size, material and variations are all important items for deliciously brewed coffee.

Cloth Drip

Due to the slow extraction of coffee through the fine and delicate cotton flannel, it never compromises on the acidity, bitterness, and flavor from the bean's original characteristics. Furthermore, you will be able to feel the coffee's rich taste from the coffee oils, which is an advantage to this method.

Medium grind coffee grounds

Let the coffee grounds Cloth filter: Cotton expand.

- After using the filter cloth, please rinse thoroughly. Place the filter in a container with clean water and store it inside the refrigerator.
- *This is to prevent oxidation of the oil of the remaining coffee grounds on the cloth filter. * The cloth filter can be replaced.
